Software Engineer

Executive Summary

Music industry professional transitioning to software development work to **use tech to solve turning messy, human heavy workflows into reliable automations and tools** that people actually use. **Over three years of experience** building React and Python services, AI assisted workflows, and data pipelines that sit between users, APIs, and external systems.

Education

Tufts University, M.S. Computer Science (in progress, 2026); Post-bacc Certificate in CS (2024)
Webster University, B.S., Business Administration (2005)

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java

Backend: Django REST Framework, FastAPI, Node.js / Express, REST APIs

Frontend: React, Next.js, HTML/CSS

AI / LLM: OpenAI API, LangChain, retrieval augmented generation (RAG)

Data & Storage: PostgreSQL, MongoDB, Redis

DevOps / Infra: Docker, Git, GitHub Actions, Nginx

Experience

[CallSine](#) — Fullstack Developer | Philadelphia, PA | Dec 2024–Sept 2025

CallSine is an agentic sales tool built with React/TypeScript, Python/Django, FastAPI and Docker that interacts with a proprietary CRM, contact database and analytics dashboard.

- Refactored Django serializers and eliminated N+1 queries in high traffic endpoints, **cutting API response times by about 60 percent**.
- Helped migrate the frontend from Create React App to Next.js, **improving load times by over 50%** through server side rendering and static generation.
- Built and maintained multi step AI prompt pipelines that coordinated multiple model calls and tools, **improving consistency and quality of generated outreach content** across different channels.

[CallSine](#) — Frontend Developer | Philadelphia, PA | May 2024–Dec 2024

- **Standardized state management** with Redux Toolkit and stronger TypeScript types, **reducing regressions** when new features shipped and making it easier to reason about cross page flows.
- **Worked directly with customers and internal users to troubleshoot production issues**, translate vague requests into scoped tickets, and iterate on features until they matched real workflows.

Freelance Consultant — E-commerce Solutions Engineer | Jan 2021–Sept 2025

Helped build scripts and services that enable large e-commerce operations to maximize warehouse efficiency and minimize downtime.

- Built a buffered sync service between Akeneo and Shopify that handled **more than 10,000 products per day**, reducing sync time from hours to minutes and giving staff reliable updates.
- Introduced queue based inventory updates using Amazon SQS, processing deltas in near real time and **cutting oversell incidents while providing clear logs and metrics** for support teams.
- Designed a fault tolerant synchronization pipeline with tiered retries and buffered database writes that **reduced database I/O by roughly 80 percent** during peak processing windows.

PROJECTS

[Balancer](#) – Frontend Lead | AI Tool for Medical Prescribers (Code for Philly)

React, TypeScript, Python, Django, OpenAI API

- Helped design and implement React flows for a RAG based decision support tool that lets clinicians query case studies and compare treatment options through clear, structured screens instead of raw prompts.
- Collaborated with clinicians and engineers to refine prompts and output formatting so results were understandable, safe, and aligned with how prescribers actually think about tradeoffs.

[AI-Enhanced Dream Journal](#)

React, Typescript, Django, FastAPI, Docker, OpenAI API

- Architected PostgreSQL database schema and Django REST API for user data management
- Implemented multi-weighted prompt system and RAG for contextual analysis

Other Work Experience

[Big Muddy Records](#) — Founder & GM | St. Louis, MO | Aug 2005–May 2020

Big Muddy Records was a record label and production company that built brands for artists in the Midwest while providing complete management services.

- Operated catalog workflows for 50+ releases and 500+ digital assets; led remote teams and vendors.
- Directed cross-functional teams to deliver releases on schedule and within budget.
- Managed a digital catalog of 500 + assets across retail and streaming platforms, ensuring consistent metadata, pricing, and royalty reporting across all channels.
